HOW-TO GUIDE

Recipe Library Studio

Save recipes from a link, plan your week, shop smarter and print beautiful recipe books. Here's everything in a few pages.

Get started in 3 steps

- 1 Open your app**

Download the PDF in your Etsy order and open your Recipe Library Studio link. Install it like an app: the install icon in Chrome or Edge, or Share → Add to Home Screen on iPhone.

- 2 Add your recipes**

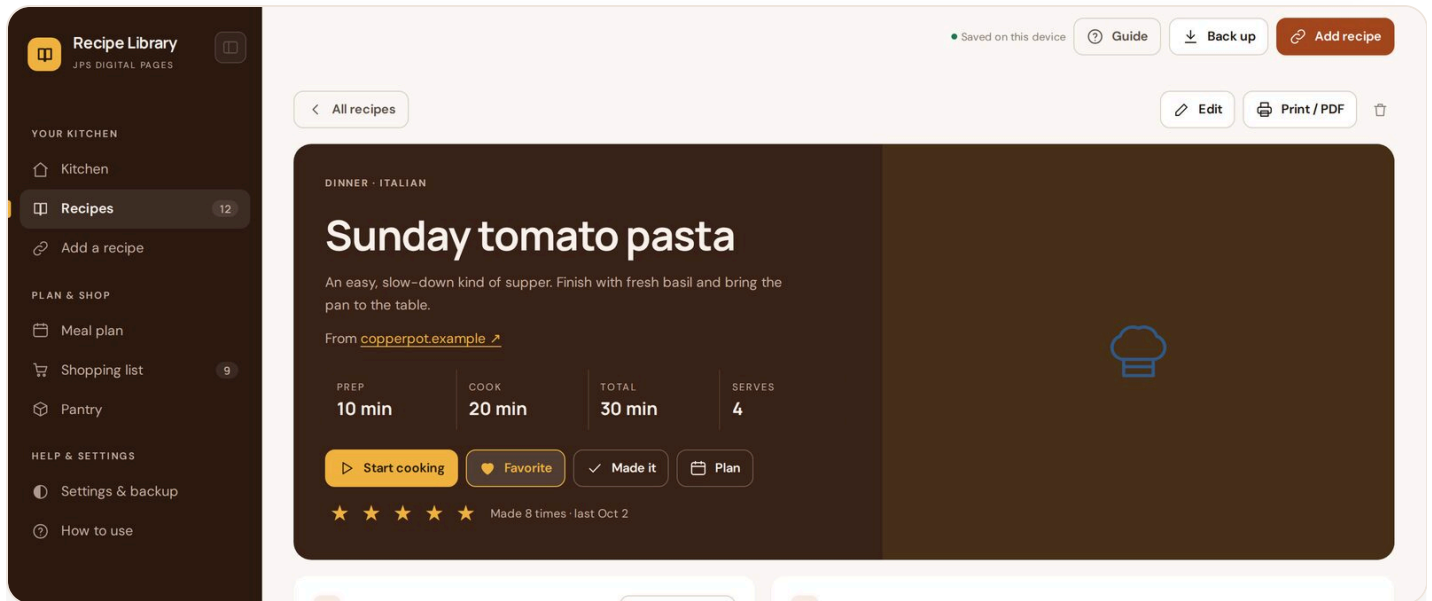

Paste a recipe link, paste up to 100 links at once, paste a whole recipe page, or type in family favorites.

- 3 Plan, shop and cook**

Drop recipes into your week, send the ingredients to your shopping list, then cook step by step with built-in timers.

A recipe page, piece by piece

Every recipe you import or type looks like this. Click any part to use it.

1 Start cooking

Big, one-step-at-a-time cook mode with timers. Use the arrow keys or tap to move on.

2 Favorite, Made it, Plan

Heart the keepers, log each time you cook with a rating and a note, or add it to a day in your plan.

3 Serves, US and Metric

Change the servings and every amount scales. Switch between the original, US and metric units.

4 Shopping list and copy

Send the ingredients to your list (things in your pantry are skipped) or copy them as clean text.

5 Step timers

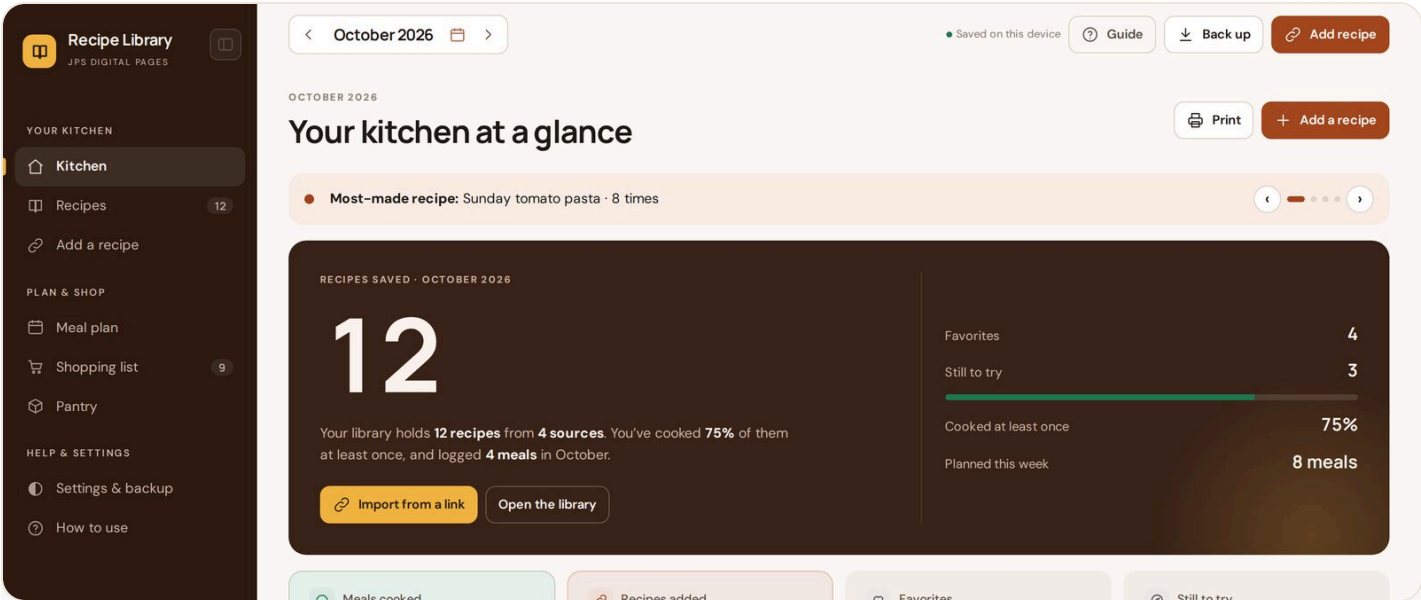

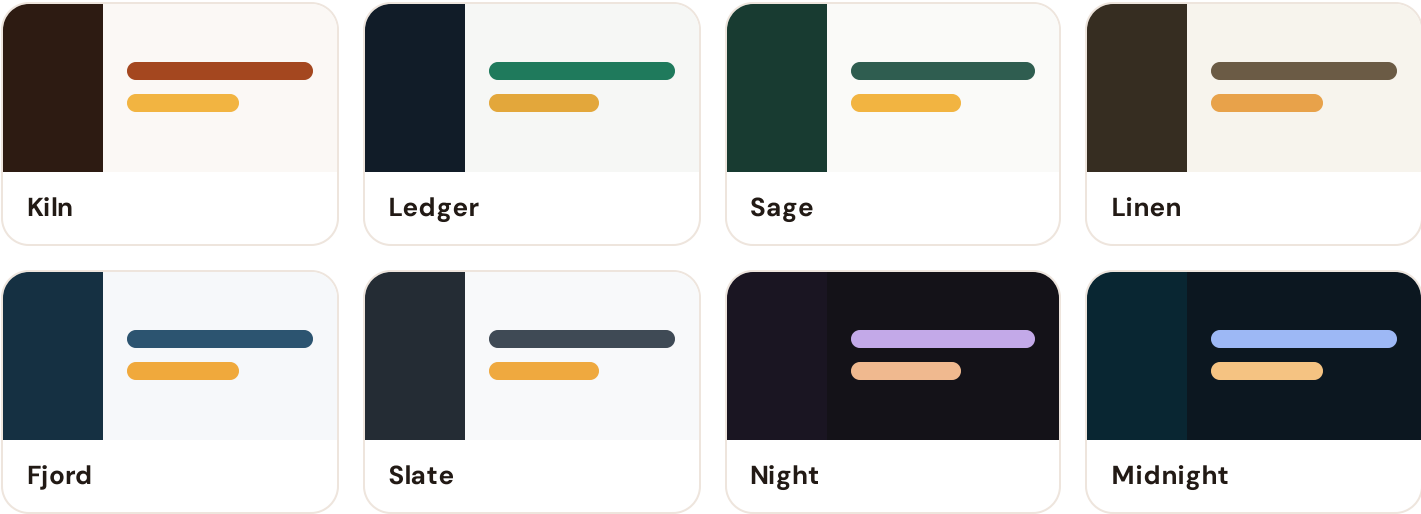

Any step with a time gets a one-tap timer.

6 Edit and Print / PDF

Fix anything, add a photo, then print a clean recipe card or save it as a PDF.

8 color themes

Pick one in Settings & backup. It changes the whole app, and your printouts stay crisp black and white with a touch of color.

Your toolbox

Everything lives in the sidebar. On a phone, tap ≡ to open it.

Kitchen

Your dashboard: recipes saved, meals cooked, what to cook next and where your recipes come from.

Add a recipe

Import from a link, import many links, paste a page, type a recipe, and check whether a website imports.

Shopping list

Sorted by aisle, scaled to your servings, with staples, check-offs and one-tap copy.

Settings & backup

Themes, units, backups (merge or replace), a backup folder, CSV export and the welcome tour.

Recipes

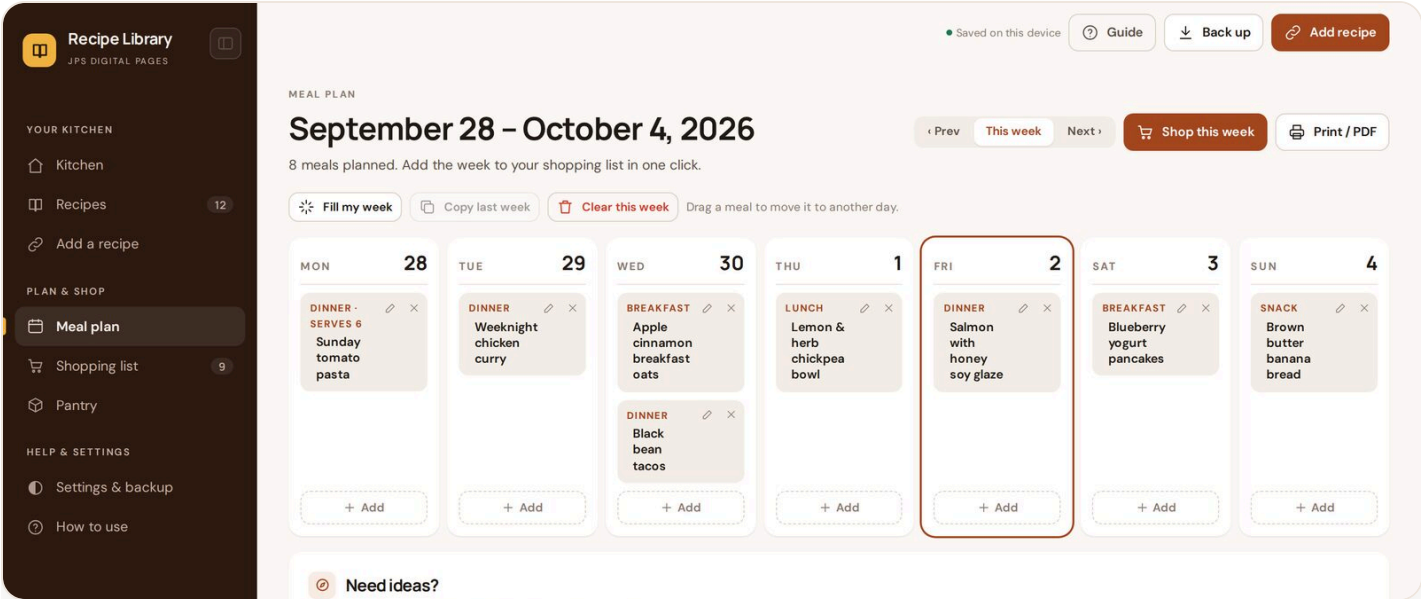

Search, filter by category, tag, collection or time, switch between cards and a table, and edit many at once.

Meal plan

Plan the week with servings, drag meals between days, Fill my week, Copy last week, and print the plan.

Pantry

Keep what you have and see What can I cook: recipes you can make now or with just a few things more.

Printing tips and important notes

- Press Print / PDF on any recipe, your meal plan or your shopping list. Choose Letter or A4 in the print window, or Save as PDF.
- For a recipe book: Recipes → Collections → Book. Pick a cover style and which recipes to include.
- Turn on Background graphics in the print window if your cover prints without color.

✓ Best for setting up and printing: a computer

Chrome, Edge, Safari or Firefox on a Mac or PC gives you the most room for planning, and the easiest printing and saving as PDF.

📱 iPhone, iPad and Android: good to know

- iPhone and iPad: open your link in Safari, then Share → Add to Home Screen to install it.
- Android: open your link in Chrome, then menu → Install app.
- Each phone, tablet and computer keeps its own library. Move recipes with Back up, then Restore → Merge on the other device.
- For printing recipe books and saving PDFs, a computer is easiest.

⚠ Your recipes are saved in your browser — please read

- Your library saves automatically in this browser, on this device.
- Clearing your browser cache, history or site data will permanently delete your saved recipes.
- Recipes do not carry over between browsers or devices: Chrome and Safari keep separate libraries.
- Download a backup regularly (Settings & backup), or choose a backup folder in Chrome or Edge to save one after every change.

Questions

A link didn't import. Why?

A few big sites, such as Allrecipes and NYT Cooking, block apps from reading their pages. Open the recipe, select everything (Ctrl+A or ⌘A), copy, and use Paste the page text. Add a recipe lists the sites that import well and the ones that need this step.

Which sites work best?

Twenty are tested, including HelloFresh, BBC Good Food, Taste of Home, King Arthur Baking, Tasty, RecipeTin Eats and Pinch of Yum. Most food blogs with a Jump to recipe button work too. Use Check a website to test any other site.

Can I use it on my phone and my computer?

Yes. Each device keeps its own library. Download a backup on one and restore it on the other; choose Merge to combine both without duplicates.

Do I need the internet?

You need a connection to open the app the first time and to import from links. Your saved recipes, plan and lists live on your device.

Is my data private?

Your library is stored only in your own browser. When you import a link, the page is read to pull out the recipe; nothing is kept.

How do I make a recipe book?

Group recipes into a collection, press Book, pick a cover style, then print or choose Save as PDF.

I cleared my browser. Can I get my recipes back?

Only from a backup file. That's why the app reminds you to back up and can save to a folder automatically.

I need help.

Email hello@jpsdigitalpages.com and we'll sort it out.
